	Latex Free Items with this symbol are latex free and are suitable for latex allergy sufferers.
	Contains Latex Items with this symbol contain latex and are not suitable for latex allergy sufferers.
CLOTHING STANDARDS	
	EN 471 - Garments carrying this symbol conform to EN 471. The class of the item is determined by the area of background and retro-reflective material used in the garment.
	EN ISO 20471 - Garments carrying this symbol conform to the new International Standard EN ISO 20471. This standard will gradually replace European Standard EN 471.
	GO/RT 3279 - Items carrying this symbol comply with the Rail Industry Standard GO/RT 3279 and are suitable for use within the Rail, Underground and Transport industries.
	EN 1150 - EN 1150 relates to high vis garments for non-professional use. The standard tests the visibility of the garment in daylight and when illuminated by vehicle headlights.
	EN 343 - EN 343 relates to garments that are intended to be worn in adverse weather conditions. The standard covers both waterproofness and breathability.
	EN ISO 11611 - EN ISO 11611 applies to garments used during welding & allied processes. Testing assesses the garment's ability to protect against flame and radiant heat.

GUIDES & CHARTS

FEATURES & SYMBOLS GUIDE

	EN ISO 11612 - Garments displaying EN 11612 are designed to protect the wearer against heat/flame. Tests assess protection against convective heat, flame spread & molten iron splashes.		EN 13982-1 (Type 5) - This symbol demonstrates EN 13982-1 compliance meaning that the item offers Type 5 protection against airborne solid particulates.
	IEC 61482-2 - IEC 61482-2 is the standard used to test garments and fabrics which are intended to protect the wearer against arc flashes.		EN 13034 (Type 6) - Items displaying this symbol conform to EN 13034, meaning that the garment offers Type 6 Chemical Protection against limited life chemicals.
	EN 1149 - EN 1149 refers to the level of electrostatic protection offered by the item. Testing covers surface resistance, vertical resistance & level of charge decay offered by the item.		EN 13758-2 - This symbol demonstrates that the garment has been tested against EN 13758-2 which indicates solar UV protective properties.

GLOVE STANDARDS

EN 420 - This standard ensures that gloves are comfortable to wear & safe to use. It covers length, sizing, dexterity, pH value and Chrome VI levels (leather gloves only). All CAT II and CAT III gloves comply with this standard.		EN 374 parts 1-2 - This symbol denotes compliance with parts 1-2 of standard EN 374. These gloves have passed air and water leak tests and are suitable for use with micro-organisms.	
	EN 388 - EN 388 relates to gloves that are intended for general industrial usage. The standard covers the abrasion, cut, tear and puncture resistance of the glove.		EN 374 parts 1-3 - This symbol denotes compliance with the standard EN 374 parts 1-3. The standard specifies the ability of a glove to protect against chemicals &/or micro-organisms.
	EN 511 - EN 511 denotes that the gloves offer cold protection. The standard tests the convective cold & contact cold insulation properties offered by the glove.		EN 374 parts 1-3 (low level chemical use) - The gloves have been tested in accordance with EN 374 parts 1-3 & are considered to be waterproof gloves offering low level chemical protection.
	EN 407 - EN 407 refers to protection against thermal hazards. The testing covers the burning behaviour, heat resistance and molten metal splash resistance of a glove.		Plastic Materials and Articles in Contact with Food Regulation EU 10/2011 - This symbol denotes that this single use item is suitable for use with food.
EN 12477 - Gloves carrying EN 12477 are suitable for use in manual metal welding, cutting and allied processes. The standard draws on EN 420, EN 388 and EN 407.	EN 455 - EN 455 refers to "Medical Gloves for Single Use". Testing includes freedom from holes, sizing & strength, biological evaluation and shelf life testing.		

PPE STANDARDS

EN 149 - Respiratory devices tested against EN 149 are defined as filtering half masks offering protection against airborne particles.	EN 362 - EN 362 details a variety of tensile and corrosion resistance tests to ensure that connectors are suitable for use as part of a fall arrest system.
EN 405 - This standard applies to valved filtering half-masks offering protection against gases, or gases and particles.	EN 355 - This standard assesses suitability of shock absorbing lanyards intended for use within a fall arrest system.
EN 140 - This standard defines the requirements for half and quarter masks intended for use as part of a respiratory protective device.	EN 397 - This standard is used to test the impact/shock absorption, penetration resistance and overall design suitability of industrial safety helmets.
EN 14387 - EN 14387 details the minimum requirements for gas filters or combined filters intended for use within a respiratory protective device.	EN 50365 - EN 50365 is used to assess the electrical resistance offered by insulating safety helmets intended for use on low voltage installations.
EN 143 - This standard details the requirements for particle filters intended for use within a respiratory protective device.	EN 166 - This standard details minimum requirements for eye protection intended for use with typical hazards found in industry, laboratories etc.
EN 352 - EN 352 defines the requirements and testing for hearing protective products. EN 352-1 covers earmuffs, whilst EN 352-2 covers earplugs.	EN 170 - EN 170 specifies the requirements for ultraviolet filters used within personal eye-protectors for industrial use.
EN 361 - This standard defines the minimum requirements for full body harnesses intended to hold the user in place in the event of an arrested fall.	EN 172 - This standard specifies the requirements for sun glare filters used in personal eye-protectors for industrial use
EN 354 - EN 354 assesses the tensile strength of lanyards used as part of a fall arrest system.
